Saletan begins by dispelling the myth that automation will lead to mass unemployment. While it's true that some jobs will be lost to automation, he argues that new jobs will also be created. The key is to identify the jobs that are most likely to be automated and to prepare workers for the new jobs that will be created.

Saletan offers a number of suggestions for how to prepare for the future of work. These include:

- Invest in education and training.
- Develop skills that are not easily automated.
- Become more adaptable and flexible.
- Network with other professionals.
- Be open to new opportunities.

Saletan also argues that we need to change the way we think about work. In the past, work was seen as a necessary evil. But in the future, work will be more important than ever. It will be a source of meaning, purpose, and identity.

*Building Better Jobs in an Age of Intelligent Machines* is a thought-provoking and important book. It's a must-read for anyone who wants to understand the future of work and how to prepare for it.
