Harris argues that the unique qualities of geeks and nerds - their intelligence, passion, and creativity - make them ideally suited to tackle the complex problems facing America today, from economic inequality to climate change.

Harris draws on extensive research and interviews with leading geeks and nerds in fields such as technology, science, and entertainment to support

his argument. He shows how these individuals are already making significant contributions to society, and how their potential is even greater.

For example, Harris highlights the work of tech entrepreneur Elon Musk, who is revolutionizing the transportation and space exploration industries. He also profiles astrophysicist Neil deGrasse Tyson, who is using his platform to promote science education and critical thinking.

Harris argues that geeks and nerds are not just the future of America, but the present. They are the ones who are driving innovation, creating new businesses, and solving the world's most pressing problems.

If America wants to continue to be a leading force in the world, it needs to embrace its geeks and nerds. It needs to create an environment where they can thrive and use their talents to make a difference.

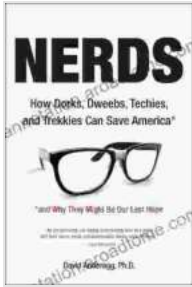

'How Dorks, Dweebs, Techies, and Trekkies Can Save America' is a timely and important book that challenges the traditional stereotypes of geeks and nerds. It shows how these individuals are not just harmless eccentrics, but the future leaders of America.
