Types of codes	Example	Extracted code	Principles of coding according to Peñit & Beck (2010) ⁽⁴¹⁾
Conceptual code	I knew only what the name of the drug was and which disease it would treat, but I knew nothing about how it should be administered in practice.	Lack of knowledge on drugs' practical administration	In line with the explanation of nature of qualitative data management, the researcher converts large masses of data into smaller, more manageable segments as well.
Relationship code	Instructor's presence with students in clinical placements is necessary to make the socialization of students in medication administration in clinical practice possible.	Necessity of instructor's supervision in medication education	Coding leads to breaking down data into incidents and examining their similarities and differences. The coding process is a cyclic process without a finite interpretation and the researcher's efforts determine the level of coding abstraction.
Participant perspective code	I believe that patients are fully able to absorb the accuracy of the nurse's medication administration.	Positive attitude towards patient's participation.	Investigator triangulation as independent coding and analysis of some of the data by two or more researchers is an appropriate method for enhancing quality of the coding process.
Participant characteristic code	As a final year and senior nursing student, I liked helping the nurse to administer drugs, but she did not allow me to work with her.	Senior student's eagerness to collaborate	
Setting code	In critical care settings, I have been provided with more chances to practice medication administration.	Critical care settings' cooperation in medication education
