Print length : 298 pages

The Proceedings of the First Asian Polyolefin Workshop, held in Nara, Japan, in December 2005, provides a comprehensive overview of the latest research and developments in the field of polyolefins. This essential reference covers a wide range of topics, including the synthesis, characterization, and properties of polyolefins, as well as their applications in various industries.

The book is divided into four parts:

1. Synthesis and Characterization of Polyolefins
2. Properties of Polyolefins
3. Applications of Polyolefins

4. Future Trends in Polyolefin Research

The first part of the book covers the synthesis of polyolefins, including Ziegler-Natta catalysis, metallocene catalysis, and single-site catalysis. The second part of the book discusses the characterization of polyolefins, including molecular weight distribution, thermal properties, and mechanical properties. The third part of the book covers the applications of polyolefins in a variety of industries, including packaging, automotive, and construction.

The fourth part of the book provides a glimpse into the future of polyolefin research. It discusses new developments in the synthesis, characterization, and applications of polyolefins. It also identifies key areas for future research.

The Proceedings of the First Asian Polyolefin Workshop is an essential resource for researchers, engineers, and anyone else who is interested in the field of polyolefins. It provides a comprehensive overview of the latest research and developments in this rapidly growing field.

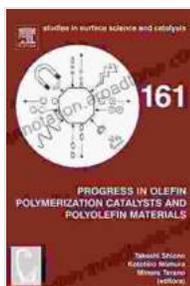

Benefits of Reading This Book

- Gain a comprehensive overview of the latest research and developments in the field of polyolefins.
- Learn about the synthesis, characterization, and properties of polyolefins.
- Discover the applications of polyolefins in various industries.
- Identify key areas for future research in the field of polyolefins.
